

PRACTICA MIDI

Transplanting machine model **Practica Midi** for conical or pyramidal soil blocks. Among the main features: the extreme precision of transplanting and the remarkable ability to work on any type of soil. The most innovative feature consists in the automatic cleaning of the ploughshare inside. Furthermore, the parallelogram structure on which the transplanting elements, that are independent from each other, are mounted, allows a uniform transplanting even on soils with many drops. It is equipped with a single plant tray holder and with press wheels to better compact the soil around the seedling. The round shape transplanting element with 8 cups has an interval movement. The minimum row distance is 28 cm. The minimum plant distance in the row is 10 cm and the maximum is 70 cm.
